#### **OPERATING PRINCIPLE**

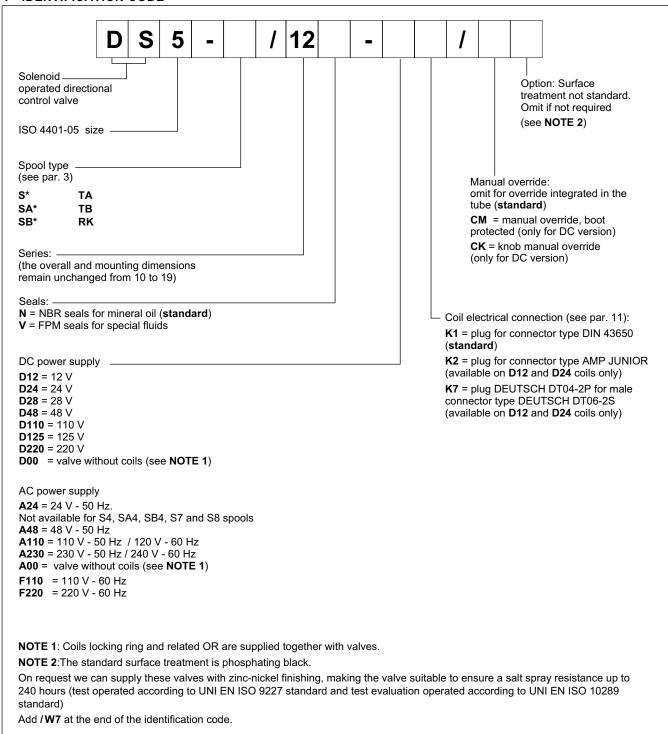

- Direct acting, subplate mounting directional control valve, with mounting surface according to ISO 4401.
- The valve is supplied with 3 or 4 way designs and with several interchangeable spools with different porting arrangements.
  - The valve body is made with high strength iron castings provided with wide internal passages in order to minimize the flow pressure drop. Wet armature solenoids with interchangeable coils are used (see paragraph 7).
  - The valve is available with DC or AC solenoids. DC solenoids can also be fed with AC power supply, by using connectors with a built-in rectifier bridge (see paragraph 7.2).
  - The DS5 directional valve direct current version is available in the following special versions:
    - version with Y external subplate drain port, (see par. 13.1 and 13.2).
    - version with soft-shifting (see par. 13.3 and 13.4)
    - version with adjustable "soft-shift" device (see paragraph 13.5)

DS5 SERIES 12

#### 1 - IDENTIFICATION CODE

#### 2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

#### **5 - SWITCHING TIMES**

The values indicated are obtained according to ISO 6403 standard, with mineral oil viscosity 36 cSt at 50°C.

COIL TYPE	TIMES [ms]		
COLLITE	ENERGIZING	-ENERGIZING	
DC	100 ÷ 150 ms	20 ÷ 50 ms	
AC	15 ÷ 30 ms	20 ÷ 50 ms	

41 310/116 ED 4/14

#### 6 - OPERATING LIMITS

The curves define the flow rate operating fields according to the valve pressure of the different versions.

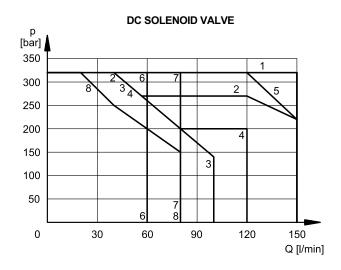

The values have been obtained according to ISO 6403 norm with solenoids at rated temperature and supplied with voltage equal to 90% of the nominal voltage.

The values have been obtained with mineral oil, viscosity 36 cSt, temperature 50 °C and filtration according to ISO 4406:1999 class 18/16/13 and are relevant to the standard solenoid valve.

The operating limits can be considerably reduced if a 4-way valve is used as 3-way valve with port A or B plugged or without flow.

For flow and pressure performances of soft-shifting configuration (options F) see par. 13.4.

Flow and pressure performances of adjustable soft-shifting device configurations (options S, par. 13.5) are influenced by the set shifting time.

#### 7 - ELECTRICAL FEATURES

#### 7.1 - Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded into the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation.

The coil is fastened to the tube by a threaded ring, and can be rotated, to suit the available space.

#### Protection from atmospheric agents CEI EN 60529

Plug-in type	IP 65	IP 67	IP 69 K
K1 DIN 43650	x (*)		
K2 AMP JUNIOR	х	x (*)	
K7 DEUTSCH DT04 male	х	х	x (*)

<sup>(\*)</sup> The protection degree is guaranteed only with the connector correctly connected and installed

VOLTAGE SUPPLY FLUCTUATION	± 10% Vnom
MAX SWITCH ON FREQUENCY	15.000 ins/hr
DUTY CYCLE	100%
ELECTROMAGNETIC COMPATIBILITY (EMC) (NOTE 1)	In compliance with 2004/108/EC
LOW VOLTAGE	In compliance with 2006/95/EC
CLASS OF PROTECTION: Coil insulation (VDE 0580) Impregnation:	class H class F

**NOTE 1**: In order to further reduce the emissions, use of type H connectors is recommended. These prevent voltage peaks on opening of the coil supply electrical circuit (see CAT. 49 000).

### 7.2 - Current and absorbed power for DC solenoid valve

The table shows current and power consumption values relevant to the coil types for DC.

Using connectors type "D" (see cat. 49 000) with embedded bridge rectifier it is possible to feed DC coils (starting from 48V voltage) with alternating current (50 or 60 Hz).

However, when supplying the valve with rectified current, it is necessary to consider a reduction of the operating limits by 15-20% approx.

#### Coils for direct current (values ± 5%)

Suffix	Nominal voltage [V]	Resistance at 20°C [Ω]	Current consumpt.	Power consumpt . [W]	K1	Coil code K2	K7

#### 8 - OVERALL AND MOUNTING DIMENSIONS FOR DC SOLENOID VALVES

41 310/116 ED 7/14

#### 9 - OVERALL AND MOUNTING DIMENSIONS FOR AC SOLENOID VALVES

41 310/116 ED **8/14** 

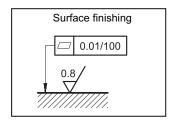

DS5 SERIES 12

#### 10 - INSTALLATION

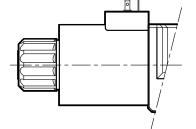

Configurations with centering and return springs can be mounted in any position; type RK valves - without springs and with mechanical detent - must be mounted with the longitudinal axis horizontal. Valve fixing is by means of screws or tie rods, with the valve mounted on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing.

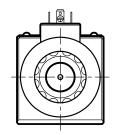

If the minimum values of planarity and/or smoothness are not met, fluid leakage between valve and mounting surface can easily occur.

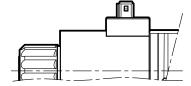

#### 11 - ELECTRIC CONNECTIONS

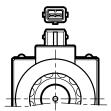

connection for DIN 43650 connector type code **K1** (**standard**)

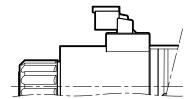

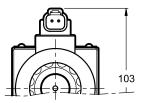

connection for AMP JUNIOR connector type code  ${\bf K2}$ 

connection for DEUTSCH DT06-2S male connector type code **K7** 

#### 12 - ELECTRIC CONNECTORS

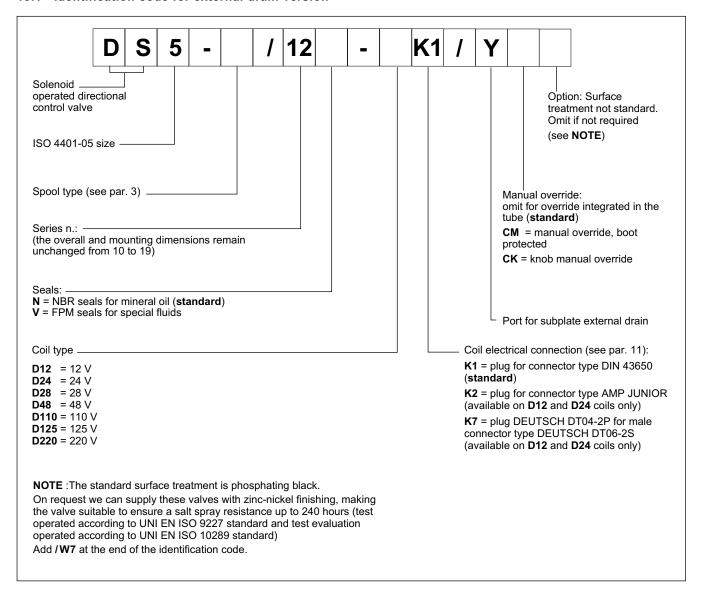

The solenoid operated valves are delivered without connectors. For coils with standard electrical connections K1 type (DIN 43650) the connectors can be ordered separately. For the identification of the connector type to be ordered please see cat. 49 000. For K2 and K7 connection type the related connectors are not available.

41 310/116 ED 9/14

### DS5 SERIES 12

#### 13 - SPECIAL VERSIONS FOR DC SOLENOID VALVE

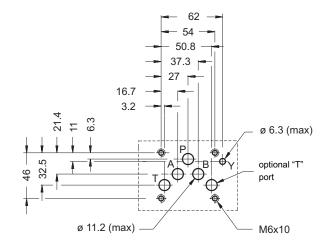

#### 13.1 - Identification code for external drain version

#### 13.2 - Subplate external drain port (option Y)

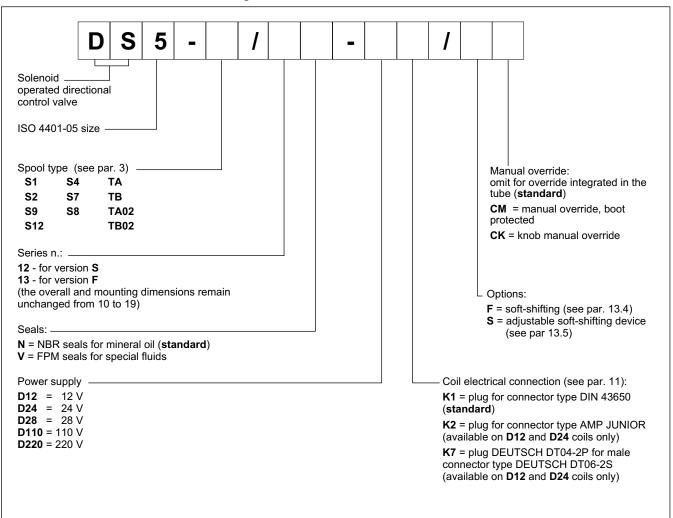

This version allows the operation with pressures up to 320 bar on the valve T port.

It is a drain port Y realized on the valve mounting interface in compliance with ISO 4401-05-05-0-05. The Y port is connected with the solenoid chamber: in this way the tubes are not stressed by the pressure operating on the valve T port.

41 310/116 ED 10/14

#### 13.3- Identification code for soft-shifting versions

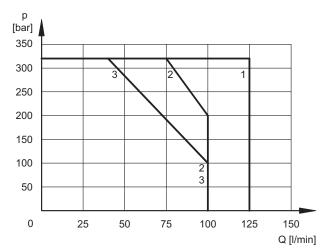

#### 13.4 - Fixed restrictor for soft-shifting (option F)

This version enables hydraulic actuators to perform a smooth start and stop by reducing the speed of movement of the valve spool.

The diagram on the side shows the operating limits of the spools available in the soft-shifting version (Note: for this version, the S9 spool must be used instead of the S3 one). The table on the side shows the switching times. The values indicated are obtained according to ISO 6403 standard, with mineral oil viscosity 36 cSt at 50°C.

The shifting time and characteristics curves are influenced by the viscosity (and thus by the temperature) of the operating fluid. Moreover, times can vary according to the flow rate and operating pressure values of the valve.

SPOOL TYPE	CURVE		TIMES		
	P-A	P-B	ENERGIZING	DE-ENERGIZING	
S1, S12	1	1	300 ÷ 500	300 ÷ 500	
S2	2	2	450	200 ÷ 300	
S4, S7, S8	3	3	400	400 ÷ 200	
S9	1	1	300 ÷ 500	300 ÷ 500	
TA, TB	2	2	300 ÷ 400	300 ÷ 400	
TA02, TB02	2	2	400	200 ÷ 300	

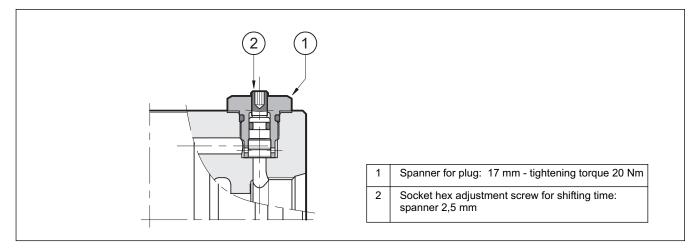

41 310/116 ED 11/14

#### 13.5 - Directional solenoid valve with adjustable "soft-shifting" device (option S)

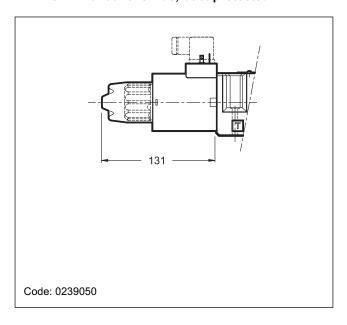

This solenoid valve is supplied with a suitable device, adjustable by the user, which enables the control of the valve spool shifting time. In this way the hydraulic actuators can perform smooth movements, by controlling the valve switching time according to the machine cycle and the inertia of the moving parts.

NOTE: during the first start-up the valve body must be filled with the operating fluid through the tap (1).

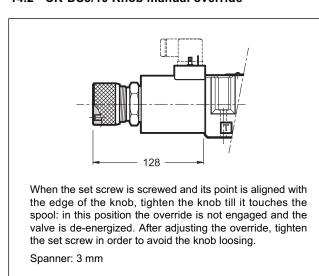

#### 14 - MANUAL OVERRIDES FOR DC SOLENOID VALVES

#### 14.1 - CM - Manual override, boot protected
