

MOUNTING SURFACE

PERFORMANCES (measured with mineral oil of viscosity 36cSt at 50°C)

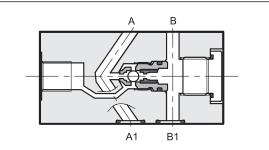

Maximum operating pressure	bar	350
Maximum flow rate thtough the cartridge	l/min	3
Maximum flow rate to A, B, P and T port	l/min	40
Ambient temperature range	°C	-20 / +60
Fluid temperature range	°C	-20 / +80
Fluid viscosity range	cSt	10 ÷ 400
Fluid contamination degree	According to ISO 4406:1999 class 20/18/15	
Recommended viscosity	cSt	25
Mass	kg	0,95

VSM3 SHUTTLE VALVE SERIES 10

MODULAR VERSION ISO 4401-03 (CETOP 03)

p max 350 barQ max 40 l/min

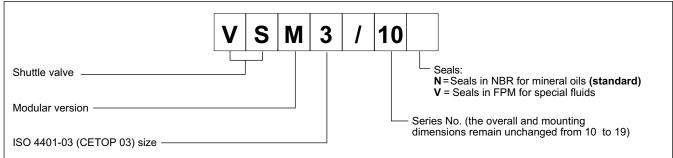

OPERATING PRINCIPLE

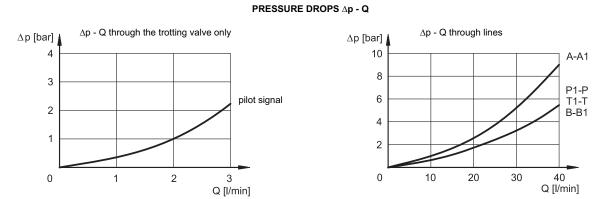

- The VSM3 ia a shuttle valve for pilot signals made as a modular version with mounting surface according to the ISO 4401-03 (CETOP RP 12H) standards.
- The valve regulates the passage of the signal with higher pressure between A and B towards the outlet side port 1/4" BSP.
- The shuttle valve VSM3 has been designed with purpose of pilot signal with flowrate up to 3 l/min

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODE

2 - CHARACTERISTIC CURVES (values obtained with viscosity of 36 cSt at 50°C)

3 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

4 - OVERALL AND MOUNTING DIMENSIONS
